SUMMARY

Full stack software engineer with hands on experience shipping real time, data driven applications in production. Recently contributed to the Microsoft DiSH Dashboard at Compass Group HQ in Redmond, and built a live auction marketplace plus a TikTok live selling automation platform from scratch. Comfortable across the stack with React Native, Next.js, NestJS, WebSockets, Redis, and PostgreSQL.

EXPERIENCE

Software Engineering Intern

2025

Compass Group at Microsoft Corporation

Contributed to the DiSH Dashboard, an internal platform that tracks dietary preferences across 165 Microsoft cafeterias serving more than 50,000 employees daily.

- Migrated legacy infrastructure to Microsoft Azure, cutting page load times by approximately 40 percent and improving the experience for kitchen staff updating preferences in real time.
- Stack: Angular, TypeScript, Node.js, Microsoft Azure, REST APIs.

Software Developer (Freelance)

Oct 2024 to Jan 2025

Fad Fashiown, TikTok Live Selling Automation

Remote project for paying client

Built a SaaS platform for fashion resellers to automate their TikTok live selling operations. The project came directly from my own side hustle of buying and selling vintage clothes, so I understood the pain points firsthand.

- Automated order capture from comments and DMs, reducing manual order entry time by roughly 80 percent for the client.
- Stack: Next.js, NestJS, WebSockets, PostgreSQL, Redis, OBS WebSocket API.

FEATURED PROJECTS

Auxtion, Live Auction Marketplace

2026 - Present

Personal project. Real time bidding platform

Built a live auction marketplace because existing platforms could not handle the latency demands of real time bidding. The hard part was making sure two people placing a bid at the exact same millisecond did not both win.

- Solved the core race condition by rewriting the auction timer three times until concurrent bids were handled atomically using Redis transactions, with WebSockets for sub second bid propagation.
- Stack: React Native, NestJS, WebSockets, Redis, PostgreSQL, Node.js.

ReachAble, Accessibility Companion App

2025, Capstone Thesis

Mobile app for users with mobility limitations

A Flutter mobile app that helps users with disabilities navigate public spaces, find accessible routes, and stay connected with their caregivers. Designed with feedback from real users in the disability community.

- Implemented Firebase realtime sync between user and caregiver devices, with custom mapping that routes around barriers like stairs and uneven surfaces.
- Stack: Flutter, Dart, Firebase, Google Maps API.

EDUCATION

Holy Angel University

Graduated 2026

Bachelor of Science in Information Technology, Specialization in Web Development. **Magna Cum Laude.**

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Dart, Python, SQL, HTML, CSS

Frontend and Mobile: React, Next.js, React Native, Angular, Flutter, Tailwind CSS

Backend and Data: Node.js, NestJS, Express, WebSockets, Socket.IO, PostgreSQL, Firebase, Redis, MongoDB

Cloud and Tools: Microsoft Azure, Vercel, Git, GitHub Actions, Docker, OBS WebSocket API, Figma

Certifications: CCNA (Cisco), Cybersecurity Essentials (Cisco), Python (Udemy), Node.js and React (LinkedIn Learning). Full list at jimwell-portfolio.vercel.app/certifications
